

Here is the link to Dr Zeman's study. It mentions about 50 questions. That is the VVIQ 16 question test and the 32 question test with comments. (48 questions)

Dr Zeman's study

Below is the bell curve that relates to the first 16 question VVIQ test results. Each question is answered with a number 1-5. One is no image and 5 is vivid. You just add your total and check the lower graph. The lowest score is 16 (like me) and the highest score is 80 (like Cathy) The upper graph is the distribution of scores on the VVIQ test of the 17 people who responded to Dr Zeman's article "I have not been able to see images all my life".

Best regards,
Cliff
