NOV 4TH: JOSEPH PRIESTLEY, CO-DISCOVERER OF OXYGEN:

Priestley, a Unitarian Minister, a radical politician, and chemist is known for his discoveries in gasses. Learn why the real facts on his most important scientific discovery and his scientific failure are overlooked!

NOV 11TH: MASTERS & JOHNSON'S HUMAN SEXUAL RESEARCH:

Dr. William Masters and Virginia Johnson faced much resistance while doing research on human sexuality. Science had to win over commonly held misinformation and superstitions in order to educate many people who insisted, "We don't need to know about sex!"

Examples of scientific research methodology that have been of great historic significance will be presented using a lecture-discussion format. Jim Strayer, retired biology instructor, is a much sought after lecturer in the field of science.
